Education

KJ Somaiya College of Engineering Mumbai, India
Bachelor of Technology in Computer Engineering June 2024 – June 2028

- **Academic Progress:** Improved SGPA from 7.1 in Semester 1 to 8.5 in Semester 2 and 9.3 in Semester 3.
- Built strong foundations in Data Structures, Algorithms, Database Management Systems, Operating Systems, Computer Networks, and Software Development.

Experience

WebCluster Private Limited Delhi, India
Web Development Intern June 2026 – September 2026

- Developed the **Dashboard & Reports** module for a carpool administration platform using PHP, MySQL, Bootstrap 5, JavaScript, and jQuery.
- Designed responsive dashboard interfaces featuring statistics cards, charts, recent activity sections, searchable data tables, filters, pagination, and status indicators.
- Implemented report-generation and export functionality to help administrators analyze application activity and operational data.
- Used **PDO prepared statements** for secure database interactions and followed structured coding practices to reduce SQL injection and data-handling risks.
- Developed the module with responsive layouts for desktop and mobile administration workflows.

InAmigos Foundation India
Web Development Intern June 2026

- Completed a Web Development internship focused on practical web application development and implementation.
- Worked on assigned development tasks according to project requirements and contributed to the completion of the internship project within the specified timeline.

Technical Skills

Programming Languages: Python, C, C++, Java, PHP, Dart, JavaScript, SQL
Web Technologies: HTML5, CSS3, Bootstrap 5, REST APIs, PHP, WAMP/LAMP
Frameworks & Libraries: Flutter, FastAPI, Flask, TensorFlow, Pandas, Scikit-learn, SQLAlchemy
Databases: MySQL, PostgreSQL, SQLite
AI & Machine Learning: Machine Learning, NLP, LLM Integration, Multimodal Vision APIs, API Integration
Developer Tools: Git, GitHub, PDO, VS Code, Android Studio

Projects

SafeScan AI *In Progress*

Python, FastAPI, SQLite, SQLAlchemy, Pandas, Scikit-learn, NLP, Multimodal Vision API

- Developing a product risk assessment platform that analyzes ingredients, concentrations, and safety thresholds across skincare products, cosmetics, food, supplements, and medicines.
- Designing personalized risk assessment based on user-provided factors such as allergies and sensitivities.
- Building an OCR and toxicity-analysis pipeline using a Multimodal Vision API to extract ingredient information from complex product labels.
- Using structured ingredient data and machine-learning techniques to support product classification and risk scoring.

LearnFlow | [GitHub] April 2026

PHP 8.x, MySQL, WAMP, PDO, API Integration

- Developed a classroom management and evaluation platform using PHP and MySQL for managing learning and assessment workflows.
- Implemented PDO-based parameterized queries to protect database operations against SQL injection vulnerabilities.
- Integrated an AI-to-PHP workflow for automated quiz generation, reducing manual effort involved in preparing assessments.
- Implemented transactional testing controls and validation logic to maintain assessment integrity.

FinancialGuard AI | [GitHub] March 2026

Flutter, Dart, REST APIs, LLM Integration, Financial Analytics

- Developed a Flutter-based personal finance application for analyzing income, expenses, investments, savings, and financial risk.
- Built financial-health calculations and future wealth projections based on user-provided financial profiles.
- Integrated REST APIs and LLM-based recommendations to generate context-aware financial insights.
- Designed an interactive mobile dashboard to present financial health scores, expense analysis, recommendations, and investment projections.

Algorithmic Quant Trading Bot | [GitHub] March 2026

Python, Machine Learning, REST APIs, Predictive Analytics

- Developed a modular Python-based trading system that analyzes historical market data to identify volatility patterns and generate algorithmic predictions.
- Implemented predictive logic using historical price information and quantitative indicators.
- Integrated REST APIs to retrieve market data and support automated price monitoring.
- Added configurable risk-management logic including price monitoring and stop-loss boundaries.

Achievements

Top 8 Finalist – Sinhgad Hackathon March 2026

SKN Sinhgad College of Engineering, Pandharpur

- Developed and pitched a functional technical prototype during a 24-hour hackathon and finished among the **Top 8 teams**.
- Presented the project's technical architecture, implementation, and feasibility to the evaluation panel.
