Education

KJ Somaiya College of Engineering

Mumbai, India

Bachelor of Technology in Computer Engineering

June 2024 – June 2028

- **Academic Excellence:** Progressed from 7.1 to 9.3 SGPA (Sem 1: 7.1, Sem 2: 8.5, Sem 3: 9.3).
- Demonstrated a 33% performance surge through a self-optimized, project-centric learning framework.

Technical Skills

Languages: Python, C, C++, Java, PHP 8.x, R, Dart, SQL (PostgreSQL, MySQL), HTML5, CSS3, JavaScript

Frameworks & Tools: Flutter, Flask, REST API, WAMP/LAMP Stack, TensorFlow, SQLite, SQLAlchemy, Pandas, Scikit-learn, Git, GitHub, PDO (Secure Prepared Statements)

AI & Specialties: Multimodal Vision API, NLP, Full-Stack Architecture, Toxicity Scoring Models, LLM Integration, Machine Learning (ML), API Integration

Projects

SafeScan AI | *Product Risk Assessment Platform*

In Progress

Python, FastAPI, SQLite, SQLAlchemy, Pandas, Scikit-learn, NLP, Multimodal Vision API

- Developing a comprehensive risk assessment platform that analyzes ingredients, concentrations, and safety thresholds for skincare items, cosmetics, food, supplements, and medicines.
- Incorporating user-specific biometric factors like allergies, sensitivities, and health conditions to calculate a dynamic, personalized risk score.
- Architecting an intelligent toxicity-scoring engine utilizing a Multimodal Vision API to perform high-accuracy OCR on complex labels, cross-referencing chemical nomenclature against FDA, WHO, and CIR databases.

LearnFlow | [\[GitHub\]](#) | *Automated Intelligent Evaluation Platform*

April 2026

PHP 8.x, MySQL, API Integration, WAMP Stack, PDO

- Designed and deployed a secure classroom management platform using the WAMP stack, utilizing PHP Data Objects (PDO) to enforce strict parameterized database security and eliminate SQL injection vulnerabilities.
- Optimized EdTech evaluation workflows by engineering an AI-to-PHP connection bridge for automated quiz generation, reducing assessment overhead by 80% and implementing transactional "Hard Blocks" to protect testing integrity.

FinancialGuard AI | [\[GitHub\]](#) | *Deep Advisory Engine*

March 2026

Flutter, REST API, Asynchronous Market Streams, Dart

- Engineered a high-performance fintech application using Flutter, integrating asynchronous system stream pipelines to consume live market datasets and calculate real-time asset volatility metrics along with automated SIP ROI projection profiles.
- Injected localized REST API conversational threads using advanced LLM integration to render real-time, context-aware financial portfolio recommendations mapped directly to user-inputted expense profiles.

Algorithmic Quant Trading Bot | [\[GitHub\]](#)

March 2026

Python, Machine Learning, REST API Client, Predictive Logic

- Engineered a modular automated execution system running on Python, utilizing historical stock market data to compute mathematical volatility trends and train algorithmic prediction models.
- Integrated secure REST API connections to handle live ticker arrays, compiling a concurrent order execution loop that monitors pricing movements and evaluates strict risk-management stop boundaries.

Achievements

Top 8 Finalist, Sinhgad Hackathon

March 2026

SKN Sinhgad College of Engineering

Pandharpur, India

- Pitched and developed a functional technical prototype within an intensive 24-hour sprint, finishing in the top 8 among major competing teams.
- Validated the technical feasibility and architectural scalability of the MVP directly to an evaluation panel of industry technical experts.

Soft Skills

Core Competencies: Analytical Problem-solving, Critical Thinking, Adaptability, High-Pressure Decision Making, Technical Communication, Cross-functional Team Collaboration, Time Management, Proactive Leadership.
